

Most Asked CSS Interview Questions With Solutions & Explanations

1. Difference Between Flexbox and Grid

Answer:

Flexbox is one-dimensional.

Grid is two-dimensional.

Explanation:

- Flexbox works in row OR column.

- Grid works in rows AND columns.

Example:

```
.container {  
  display: flex;  
}
```

```
.container {  
  display: grid;  
}
```

2. Explain CSS Specificity

Answer:

Specificity decides which CSS rule is applied.

Priority:

Inline > ID > Class > Element

Example:

```
#title {  
  color: red;  
}
```

```
.heading {  
  color: blue;  
}
```

Explanation:

ID selector has higher priority.

3. Difference Between Relative and Absolute Positioning

Relative:

Moves relative to original position.

Absolute:

Moves relative to nearest positioned parent.

Example:

```
.parent {  
  position: relative;  
}
```

```
.child {  
  position: absolute;  
  top: 10px;  
}
```

4. What is z-index?

Answer:
z-index controls stacking order.

Higher z-index appears on top.

Example:

```
.box1 {  
  z-index: 1;  
}  
  
.box2 {  
  z-index: 2;  
}
```

5. Difference Between em and rem

em:
Relative to parent font size.

rem:
Relative to root html font size.

Example:

```
html {  
  font-size: 16px;  
}  
  
.box {  
  font-size: 2rem;  
}
```

6. How does box-sizing work?

Answer:
Defines how width and height are calculated.

content-box:
Default behavior.

border-box:
Padding and border included in width.

Example:

```
box-sizing: border-box;
```

7. Difference Between visibility hidden and display none

visibility: hidden
- Element hidden
- Space remains

display: none
- Element removed completely
- No space remains

8. How to center a div?

Using Flexbox:

```
.parent {  
  display: flex;  
  justify-content: center;
```

```
    align-items: center;
}
```

9. What are pseudo classes and pseudo elements?

Pseudo Classes:
Define special state.

Examples:
:hover
:focus

Pseudo Elements:
Style specific part.

Examples:
::before
::after

10. What is BEM Naming?

BEM:
Block Element Modifier

Example:

```
.card {}
.card__title {}
.card--active {}
```

Explanation:
Improves maintainability.

11. Difference Between inline, block, and inline-block

block:
Full width.

inline:
Only content width.

inline-block:
Inline but supports width/height.

12. How media queries work?

Answer:
Media queries apply CSS based on screen size.

Example:

```
@media (max-width: 768px) {
  body {
    background: red;
  }
}
```

13. What causes reflow and repaint?

Reflow:
Layout recalculation.

Repaint:
Visual redraw.

Explanation:

Changing width causes reflow.
Changing color causes repaint.

14. How to optimize CSS performance?

Best Practices:
- Reduce unused CSS
- Avoid deep nesting
- Use reusable classes
- Optimize animations

15. Difference Between transition and animation

transition:
Needs trigger like hover.

animation:
Runs automatically using keyframes.

Example:

```
transition: all 0.3s ease;  
  
animation: slide 2s infinite;
```

16. What is object-fit?

Answer:
Controls image fitting.

Values:
cover
contain

Example:

```
img {  
  object-fit: cover;  
}
```

17. How sticky positioning works?

Answer:
Element sticks during scrolling.

Example:

```
header {  
  position: sticky;  
  top: 0;  
}
```

18. What are CSS variables?

Answer:
Reusable CSS values.

Example:

```
:root {  
  --primary: blue;  
}  
  
button {  
  background: var(--primary);  
}
```

}

19. Explain stacking context

Answer:

Controls z-index behavior.

Created by:

- position + z-index
- opacity
- transform

20. What are accessibility best practices in CSS?

Best Practices:

- Proper contrast
- Focus states
- Responsive text
- Avoid tiny fonts
- Keyboard accessibility
